# DefiNova WhitePaper

Marketplace Bot Automation in browser
build on Binance Smart Chain.

# Introduction

## Welcome to the DefiNova universe!

In our universe, there are no outdated paper and electronic money, they have completely disappeared, replaced by a new currency - Definova Token - DFN, which functions based on Binance Smart Chain network.

To develop in this space universe, you need to constantly improve your skills and have a sufficient amount of digital currency in order not to miss your chance to achieve crypto independence.

Cybernetic automation has replaced many workflows. Thanks to it, today you can control cyborgs and conquer planets and galaxies.

You will be an Automancer, a resident of Ikea Station. You have to conquer galaxies and planets, go through space quests that can give unlimited power and knowledge about the universe.

You will collect plasma to upgrade your skills, collect cartridges for cyborgs and upgrade them. The further you advance, the more experience, abilities, new skills and incredibly powerful artifacts you will acquire, and in the end you will receive a huge influx of cryptocurrency.

From our point of view, **Definova** is a top-down cryptosystem consisting of many directions for enrichment. We believe that one of the most important criteria for evaluating our platform is the time in our lives. Our Metaverse is a figurative example of digital thinking, where everything is automated and a person can develop and earn cryptocurrency. This means that humanity must necessarily have resources to generate income, which at the same time have an impact on the reality and life of a person.

It should be noted that **Definova** is a world in which ownership of assets is identified and therefore it is clear that **Definova** cannot become a reality without blockchain.

**Definova** is a world of automation where a person automatically earns cryptocurrencies. Due to this, time plays only for the benefit, and not against it, as in real life. Payment is made only for obtained result.

**Definova** is the World of the Metaverse, in which all conditions are created for each person. It doesn't matter if he just came to the cryptocurrency or he is an advanced user in the crypto world.

It is worth noting that with the help of Definova you can earn regardless of the size of the deposit: be it $ 2 or $ 200 thousand. Our Metaverse gives everyone a chance to self-actualize through cryptocurrency for both an experienced and a novice investor.

The **DFN token** is a general economic metric by which Definova users can measure their level of cryptoactivity. The token is used to increase the deposit of each user.

We hope that we can help our users earn money freely and become financially independent.

# 1.Overview of the platform

## 1.1 Prerequisites

## 1.2 Definova - decentralized platform

## 1.3 Ideology of the project

# PLATFORM OVERVIEW

## 1.1 Prerequisites

**Definova.club (DFN)** is a platform ruled by robots. From the very beginning, you have the opportunity to install any robot that will faithfully work for you and earn you cryptocurrency. Each robot works on a specific site that pays for useful actions. Usually people work there: they press buttons, watch videos and get rewards, but not with us. Here, a person rests, and robots work, carrying out full interaction and understanding. The more you use robots, the more efficiently they will work. Inside the platform there is an interface with settings for the abilities of your robots and for the development of your account. Each of the abilities has a positive effect on the amount of earnings for your robot, and therefore on your personal income. It is worth noting that robots need to be maintained and cared for. The work provides for a mechanism in which part of the earnings goes to the platform, the robot performs useful actions. The payments are put inside the cyborgs in DFN tokens.

DFN is a cryptocurrency token based on the BSC network. There are several ways to get the main DFN token on the platform, such as staking, completing quests, info courses and bonuses for helping to develop the platform. And of course the referral system. All settlements with users are made using MetaMask and WalletConnect wallets.

We have thought of a convenient and profitable cryptocurrency mining system for each user who can use bots for free. In the event that a user wants to improve the work of his bots and begins to upgrade his account, he will need to have more DFN on his account.

Anyone can replenish the platform's balance in DFN through Pancakeswap in exchange for BNB (Binance's official token). Conversely, the user can withdraw the mined cryptocurrency from the platform and dispose of at his own discretion.

It should be noted that the gameplay is structured in such a way that each user will pay DFN only if the bot earns him a cryptocurrency. That is, the bot's work is paid only if the useful action is successfully completed and will constitute a certain fraction of the total amount of the received cryptocurrency volume.

Robots bring tremendous relief to human life. You don't need to spend hours on monotonous and boring work that robots will do for you, because they are created for this.

Naturally, the robot does not need to sleep or eat. Moreover, the robot can simultaneously work for 40-50 people - its potential is unlimited. Such an immersive process awaits you in our Definova platform.

The age of automation began a long time ago, and now even you have the opportunity to become the owner of your personal conveyor for the production of DFN cryptocurrency ...

## 1.2 Platform introduction

Definova is a decentralized cryptocurrency earning platform. Only Definova users can access automation on sites that pay with cryptocurrency. Definova combines various blockchain financial methods such as Automation, NFT, GameFI, Auto Compound Staking and a trading indicator for market analysis. Our goal is to create a platform that is fast, comfortable, colorful and fun Metaverse.

Definova consistently releases robots (cyborgs, drones and nanites), each of which has different functionalities and ways of earning cryptocurrency and performing various useful actions to make your life easier. In addition to positive emotions, the tools of our platform will also bring you cryptocurrency earnings. Definova brings users not only a fresh and enjoyable gaming experience, but also financial wealth effects.

After the development and release of several platform updates, we will begin to create a platform distribution system that will simultaneously help a large number of people in the world to earn cryptocurrency. In addition, attracting more users through favorable conditions on the platform will create a large cluster of investors from all over the world. Of course, all this will affect the value of the DFN platform token when trading on exchanges, and you, as a trader, can also earn money.

The community of Internet users encourages the rules established by the platform due to the fact that everything is free on it, and payment is charged from the account only in the case of useful work done by robots on sites for earning cryptocurrency and other types of robots.

In addition to more choice of robot types, you have the opportunity to develop the abilities of your robots and improve your own account as your virtual self. In addition, we have created a large amount of interesting content to enhance the effect of wealth, which will attract more participants from different spheres of influence. The value of the platform's main token will evolve through the sale of digital goods. Due to this trend, the growth of the DFN asset can be viewed as a spinning flywheel, which is amplified by accumulation through accumulation multiplied by staking. Consequently, the more DFN platform brings benefits to a large number of users in its direction, the faster and faster the flywheel spins, which means the value of the token increases and more and more people will be interested in investing in the platform in order to get extra profit.

The Definova platform itself is capable of multiple account upgrades, as it should be in GameFi, which is what our platform corresponds to.

Players can earn DFN tokens, leveling up their account, completing quests, exploring video content on earning cryptocurrency, using robots, trading futures using DFN trading and staking. Meanwhile, users can communicate in the investment community and jointly look for new trends in earning cryptocurrency while robots earn it. Since Definova is DFN's unique single platform, anyone can start using the platform to do this. It is enough to connect your MetaMask wallet or WalletConnect. Definova is a unique opportunity to charge part of the earnings only after the work is done, due to which the user never pays in advance, which means he can be calm about his funds. The preservation and growth of cryptocurrency are the main principles of the existence of our platform.

Quests are another highlight of Definova. Each user has access to tasks to increase his crypto-education due to which his horizons and thinking on the crypto market develop.

Every day there are more and more new trends in the world of cryptocurrency, how to keep up with everything and keep abreast of new products. That is why we are creating one more direction - training videos with visual instructions on how to earn cryptocurrency, for example, trading in the Derivatives market through indicators. Or reselling the cryptocurrency in the exchanger.

This project is unique and has no analogues on the Internet, which means that an increase in the number of participants increases the income that each of them receives from collective investment, due to which the income will be higher than separately.

The established rules within the platform related to the values in the system (conditions for earning cryptocurrency without an initial deposit) will make the project recognizable and popular.

In the future, uniting the interests of all users on the one hand and programmers on the other side of the platform, more and more robots will be created for earning cryptocurrency, which will have a beneficial effect on the development of the project as a whole.

Everyone can fulfill their desires with Definova.

Each user partially owns the DFN token, which means he is a co-founder of the entire project and participates in creating common wealth.

The most active and loyal users will be awarded the status of an ambassador and have

## 1.3 Ideology of the project

We are a group of programmers who firmly believe that the blockchain will become the backbone of the future Metaverse, and the method of "Making money through browser automation" on all blockchain sites will help the world to become even faster and more convenient, and thereby change the economic model of sharing the future Metaverse. Due to its advantages and offers to the cryptocurrency market, the project will surely find its followers and easily become popular and successful and will be able to form a new direction on the Internet. The project will receive a wide coverage exactly when each user becomes a successful crypto enthusiast through the use of our Metaverse.

We will continue to independently develop more and more robots and present them to the world. It is obvious that the next 12-15 years will be a global transition of humanity to the virtual world. Metaverse, matrices, VR glasses and more. Whoever has time to join in all this will be able to effectively ensure his entire future life. It is so difficult to find stability in the world, so let's create it together. Starting with our project Definova, where the main principle is that all developments are free, and payment is charged only for the result, after fulfilling promises.

All these conditions indicate an honest partnership, where everyone can jointly influence the growth of their asset and the asset of each participant as a whole. By creating a modern platform for earning cryptocurrency, the creators and the user, using automation controls and financial instruments, will be able to change their own financial well-being. Don't oversleep your luck when it's in front of your nose!

# 2. Detailed description of the Definova platform

**2.1 User mode overview**

**2.2 DFN value assessment in the platform**

**2.3 Description of tokenomics**

**2.4 DFN Token**

**2.5 Staking on Definova**

**2.6 Contribution ranking system**

**2.7 Definova User Reward System**

# 2.1 User mode overview

Paper and electronic money has completely disappeared, a new cryptocurrency has appeared - Definova Token.

To survive in this world, you need to constantly evolve, pump your skills and have a sufficient amount of digital gold.

The world got rid of ordinary money, simplified many work processes, and from now, cybernetic automation reigns here.

Every inhabitant of the universe must learn to control cyborgs in order to survive.

Learn the secrets of the new universe, collect plasma, pump levels, pump your knowledge, cyborgs, participate in NFT sales and multiply your tokens in the Definova bank.

Definova - GameFi Automation UniVerse.

The platform has a wide range of different types of robots. By robots, we mean small mini programs that are installed on the user's computer. These programs reproduce the movement of the mouse when automatically visiting sites in the browser. The robots cyclically

execute the script of programmed actions specified by the programmer when creating the robot. All this happens on the internal browser of the bot, where a person can only observe the work. On sites where a person had to spend time working on sites, now robots do it for him, and the person receives cryptocurrency or money, depending on the type of bot.

Mini-programs can click on necessary buttons on websites, fill out contact forms, register accounts, even put likes on social networks. In general, everything that a person can do in a browser can also be done by a robot. And over and over again without stopping!

Each robot is designed to work on a specific site. After registering on the Definova.club website, you will have access to a wide selection of robots, each of which you can study before proceeding with installation on your computer. The power of the robot directly depends on the power of your computer, in particular, on the number of processors. By power, we mean the number of concurrently working browsers, where the same combinations of sequential actions will be executed in parallel, which significantly speeds up the process of performing work in comparison with a person and one miniprogram can replace 40-50 people.

You also have the opportunity to install several robots of different types at once, and they will also be able to work together with each other. Since all bots are free, one person can install the same robots on an unlimited number of computers.

Each bot works for a specific site and performs a number of useful actions as a result of which the account that you personally registered on the website receives a reward on balance. The equivalent and volume depends on the conditions of the paying site. You can withdraw all earned funds to your personal wallets and spend at your discretion.

The only thing is that you will need to refund some of the funds to the Definova platform for using the bots that did the work for you that you were paid for. But you have saved time and increased your income. Also, the user will need to pay all costs at the cost of the bot. More details about the conditions of use will be indicated in the description for each robot prior to installation.

When using robots, you will need proxies to stay incognito on sites. To save money on them, you should use the same proxy in different robots, then you will earn more and spend less.

You can start using bots absolutely free of charge, as the platform provides an option when we pay DFN for useful actions, such as inviting friends and subscribing to our social networks.

**The DFN created for the platform has several options for working:**

1. You can trade directly on trading markets such as Pancakeswap, DexGuru, DexTools. In the future, on spot exchanges.

2. To use robots, you must have DFN tokens on your balance, which is a prerequisite for the operation of the entire platform.

3. There are many options for improving the parameters of robots, in which you can use DFN tokens to improve the efficient process of earning cryptocurrency.

4. All spent DFN tokens will be held in a trading fund for general storage. When reused, 10% will be burned (completely destroyed) as a start-up cost. The game fund is used to develop new robots and pay out all staking participants. Definova will independently decide when and how much to use in the future.

5. Place in a pool with liquidity to receive% for trading commissions on Pancakeswap and other DEX BSC exchanges.

## 2.2 DFN value assessment in the platform:

1. Robots, each bot belongs to a specific type of bots. It can be a bot that collects cryptocurrency from faucets, which brings specific benefits to its owner. Every action brings income. The bot can act as a registrar of mail accounts. In this case, there is no direct earnings of cryptocurrency, but these accounts can be sold on the Internet with a 2-5 fold markup. There are other types of bots, for example, for social networks. For example, placing likes and subscribing to accounts in Tiktok. For this, the bot receives direct payments, but not cryptocurrencies, but dollars.

2. The platform has a separate section on training how to earn money and insider information on how and where to invest your assets in order to earn even more dollars and cryptocurrency. Each course will be paid separately by each user. As a result, the user will receive unlimited access to the video material specified in the description of the topic with up-to-date information.

3. Trading indicator for derivatives trading on **tradingview.com**. Due to the indicator, you will be able to keep abreast of price changes in the market. The indicator will give you the opportunity to save time, money and will help you in deciding what to do next with your assets. Naturally, you need to know how to handle the indicator, read its signals. Know risk-management and money-management then you will succeed! An indicator is a tool, and a person makes a decision! The result must be judged at a distance. The indicator works on the sell-buy principle and will be developed based on several proven strategies. It is based on the iron rules of trading with the help of which the user can be sure of the indicator signals! Everyone who has ever tried to trade through the indicator has always made a profit!

## 2.3 Description of tokenomics

All bots on the platform will continue to earn cryptocurrency. You will need a DFN token on the platform, which will be spent as the bots are used. DFN tokens are a necessary resource for all bots to work. DFN token economic model:

All bots on the platform are free. The platform programmers maintain the serviceability and quality of the bots. The bots will be billed from the account of the user who uses the bots and receives income from them. The fee charged depends on the level of development of each user separately. Bots will be presented on the site as goods and they will have a description of the functions they perform. The user will have access to the instruction. The user will be able to familiarize himself with it before installing the bot. Different bots may have different economic benefits, the payment for solving useful actions will be charged in proportion to the benefits of using the bot. Also, bots have a gradation of different types of useful actions. Each bot is made for a specific site where it works.

Any bot remains the positioning product of the entire platform and fulfills the main goal of "Decentralized automation of routine actions in the browser." Bots will replace humans in everything, including making money.

DFN tokens spent as the bots work will go to the public fund, and when they need to be processed into a common pool, 10% of the one-time will be burned, and the burning will continue until the total circulation is equal to 800 million. In the future Definova will decide whether to continue burning and to what extent.

All DFNs traded on the Definova platform market are set by the market price of the total assets by users, and a 4% commission is charged for each sale. This commission is charged for withdrawing funds from the platform to your personal wallet. Half of the proceeds will go to the treasure pool of the entire DFN platform.

This pool of funds will be used to reward users who continue to block the DFN token for one year. The DFN token is a platform management token that also demonstrates core value. Its long-term holders will have future rights to operate the platform and be rewarded in the form of a pool of treasures.

Users who use all products across the entire platform, trade and learn can receive DFN token rewards through ratings.

The main production of DFN tokens comes from the use of bots. The entire Definova platform has 1,000,000,000 DFN tokens, which strictly limits the number of tokens and increases the value of the token for each user and for the whole project.

Each time an additional 10,000 tokens are burned, the rise in the value of the DFN asset rises by 0.001%. The owner of each token receives passive income in their wallet. All assets can be exchanged at any time for any currency available on the BSC DEX exchange.

**Tokenomics of the project:**

**The total number of DFN tokens is 1,000,000,000 billion tokens**
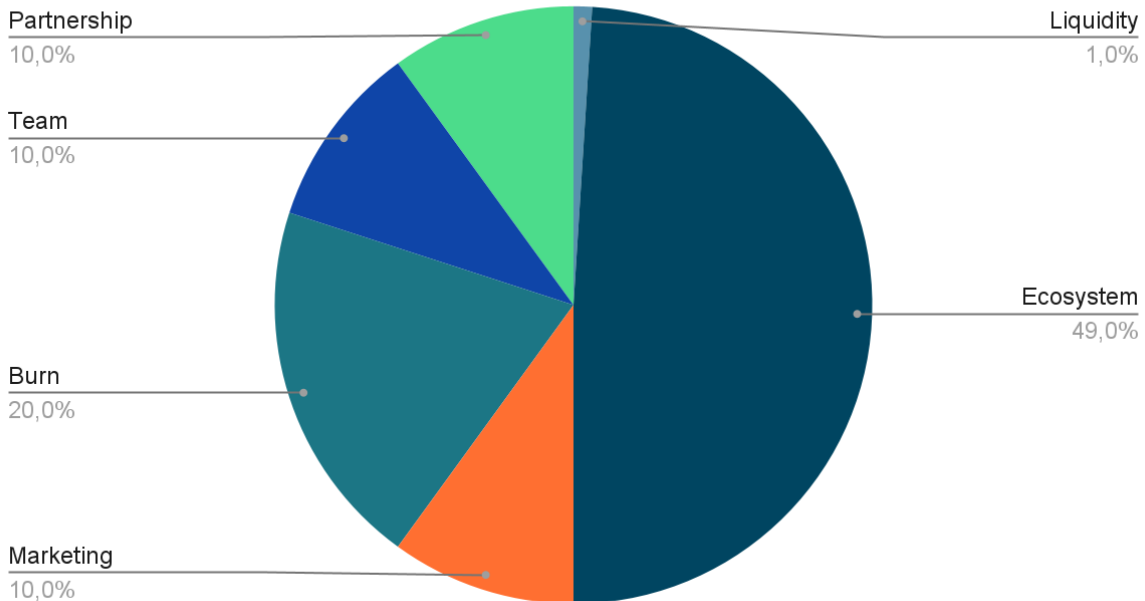

**1% - Liquidity**

**49% - Community and Ecosystem**

**10% - Marketing and New Development**

**20% - Burn**

**10% - Developers. Team**

**10% - Partnership**

## Tokenomics

**Partnership** 10,0%

**Team** 10,0%

**Burn** 20,0%

**Marketing** 10,0%

**Liquidity** 1,0%

**Ecosystem** 49,0%

## 2.4 DFN Token

The economic model of the DFN token. The token serves as the main unit of exchange for interaction between platform developers and users who use the platform's services

Each user has the right to own a token and can buy or sell it at the market price at any time.

Meanwhile, the DFN platform also allows all players to receive DFN tokens through DeFi and staking and the growth of the asset itself in price in the market.

**The main scenarios for using the DFN token:**
1. After listing on PancakeSwap and Exchanged, playback should consume DFN tokens.
2. To make money from the platform, you will need to use different bots. For efficiently performed work by bots, you need to pay DFN tokens in the personal account of each use.
3. To participate in the Annual Treasure Pool Rewards, one year of ownership of the DFN Token is required.
4. To participate in DeFi liquidity mining and DFN mining, a large number of DFN tokens are required.

5. To participate in the management of the board of directors, DFN tokens are required to obtain voting rights.

6. More scripts will be developed for integrating new bots of independent programmers, which will allow filling the platform with new developments.

## 2.5 Staking on Definova

1. In order to promote the healthy development of the DFN ecosystem, the DeFinova platform introduces DeFi.

2. Users can participate in minting of DFN.

3. Officially launched mode: DFN single token mode.

4. Users can receive rewards in the form of DFN tokens according to the model they wish to participate in.

5. After users place a DFN bet for more than 3 days, judging by the block recording time, they will meet the conditions that activate the treasure trove's reward mechanism to reward users who hold DFN tokens for a long time.

6. Calculate according to a certain ratio through the reserve fund and BNB rewards or DFN tokens as well as plasma rewards will be distributed.

7. In the future, more stable staking for the token will be gradually promoted.

2.6 Liquidity staking on Definova

Each contribution of the DFN token to liquidity is a contribution both to the DFN system as a whole and to all users. Over a long period of time, 50% of the transaction gas fee will be put into the pool of universe treasures to reward users who hold DFN tokens for a long time, every year.

## 2.6 Contribution ranking system

The DeFinova Platform will continue to reward loyal users who contribute to the DeFinova Platform. The platform will apply a system of bonuses for users who support the project. The value of the contribution is the player's contribution to the overall ecosystem. A large number of DFN tokens will be provided to listed users every month according to the rating of the contribution. Currently, when calculating the cost of an investment, the use of bots and market transactions are of greater importance.

## 2.7 Definova User Reward System:

The total distribution of the player's reward pool per month will vary based on the overall percentage level of DFN bets, as a fraction of the unlocked stock + DFN outside the reward pool.

**Types of ratings on the platform:**

1. Rating of the popularity of using bots

2. Rating of user activity in attracting referrals

3. Rating of contribution to staking

# 3. Gameplay

## 3.1 DeFinova and Metamask auto-registration

When you enter the platform using your username and password, you need to authorize your MetaMask using your password. Next, you add the DFN token to it under the BEP-20 contract **0x1e1DB619834036435bEbE71574589b21e4EDDd2d** and top up your DFN balance. You can buy DFN on Pancakeswap under the same contract and then pay with it and top up your balance in Definova. Below is a detailed instruction on how to replenish the balance.
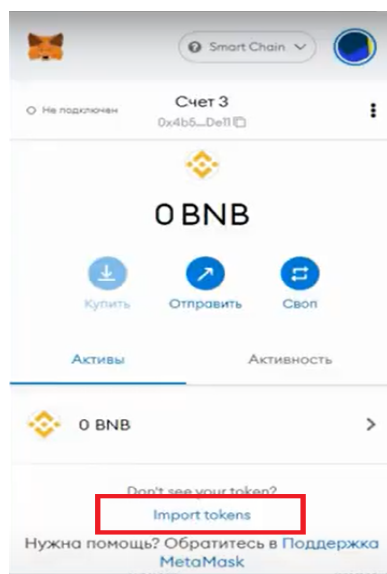

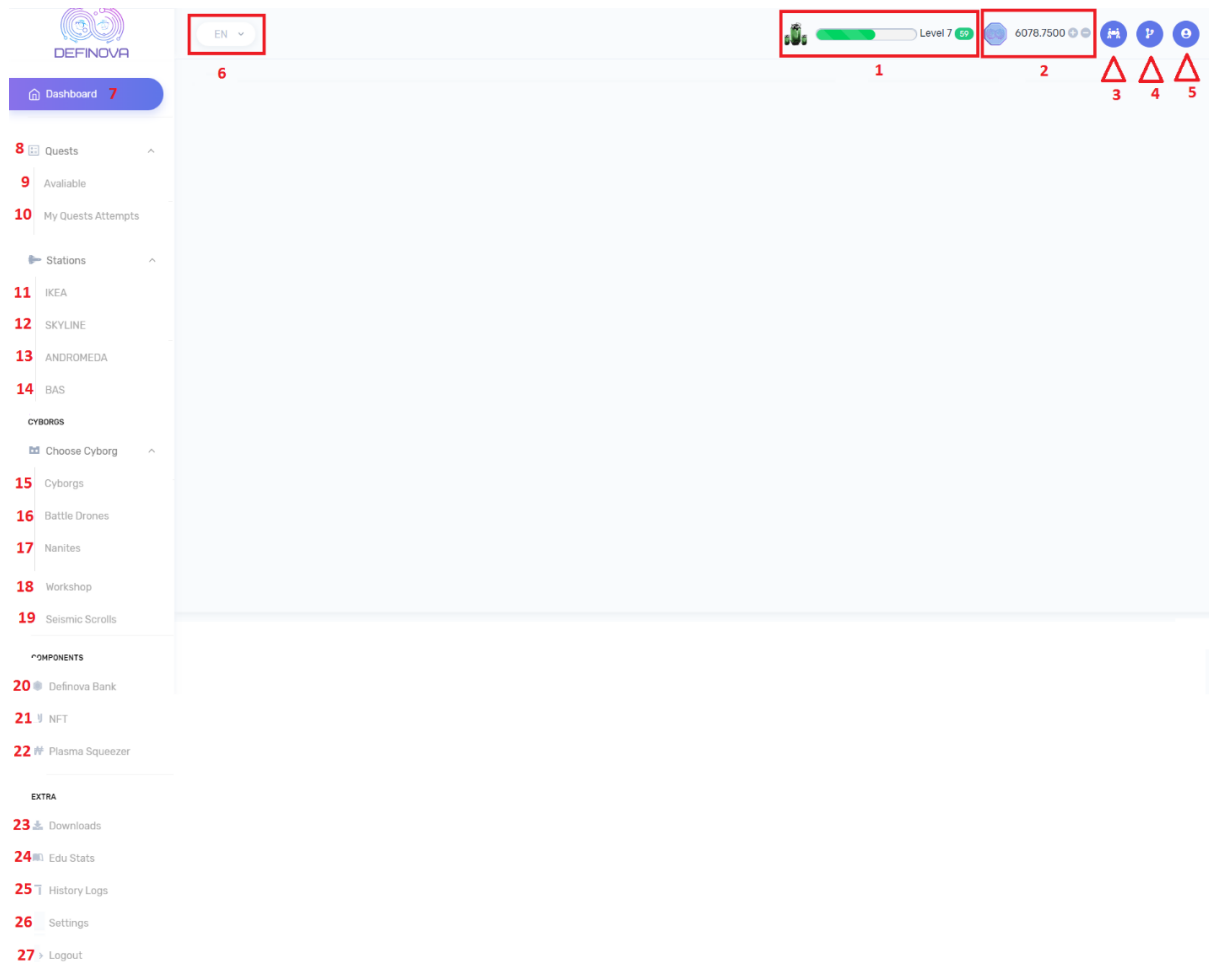

# 3.2 Visual description of the DeFinova platform

## №1 - Seismic plasma or just plasma

Plasma is a measure of the unit of measurement of your activity on the DeFinova platform. Plasma is a kind of platform experience - experience [XP]. 100 units of plasma is equal to 1 account level. For each account level, you get 1 point, which you can spend on improving the engineering center for Upgrade State skills of bots and 1 point for the automancer profile.

Plasma can be obtained either by completing tasks on the platform, or using bots and paying for their work by replenishing your account with a DFN token. For every DFN equivalent to $ 1, you will receive 1 plasma. You can also exchange DFN for plasma on the Plasma Squeezer market.

**№2** - **Number of DFNs (abbreviated from DeFinova)**

DFN - this indicator is your DFN balance. You can pay them for the number of useful actions when robots or other goods work on the platform. You can always find out the cost of one DFN on the global platform (link). The token is traded against the BNB pair as it is done on its BEP-20 network. In the coming days, you will be able to buy DFN not only through PancakeSwap, but also through other exchanges.

**№3 - Referral program**

In this section you can find your unique **link**. With the help of it, all users who register using your link and will use bots, and then pay for their work. You will automatically receive 10% of our income for the users you invited to your balance. And then you can sell these tokens at the market price of DFN and get $.

This section contains traffic statistics.

**Stats** - history of income generation.

**Banners** - banners for your online advertising.

**Payouts** - payments.

**Referrals** - a description of who your referral is! You can always make sure the platform values its followers and pays you for your efforts!

**№4 - Robot Engineering Center**
Each robot (bot) is equipped with 4 skills that can be improved by 1
point in turn with a new account level (when you get 100 plasma).
The skills will help improve the performance of robots and reduce
the cost of operating the bots.
Engineering Center Skills:
**1. Ammo Booster** - pumping the size of the plasma store, the less
energy is spent on the attack
**2. Weapon Overdrive** - The weapon stops sticking every time and
needs to be improved as often as possible
**3. Speedy Missile** - To increase the rate of fire from the weapon, you
need to pump the pulse module
**4. Plasma Battery** - Install as many Plasma Battery Modules to extend
runtime.

**№5** - **automancer-profile** development of account abilities
Inside information will be presented in Ver 2.0
**№6 - language** change RU / EN
**№7 - Dashboard**: background about the description of the journey
around the world of Definova. A real cosmogory awaits you and at
the same time an exciting and profitable gameplay!
**№8** - **Quests**
A quest is a task that the user must complete in order to pump his
experience (amount of plasma). For example, a quest for knowledge
of cryptocurrency. We give the user a dictionary of cryptocurrency,
after studying, he passes a small test, if he successfully answered all
the questions, then he passed the quest and got experience
(plasma).
**№9** - **Actual (started) quests**. Every day you can complete 1 quest,
this parameter will grow as the platform develops!
**№10** - **My Quiz Attempts** - completed quests. Who knows, maybe in
them you will find answers in new quests.
Item Stations - section of info courses. We want and are ready to
share our current knowledge, schemes and insider information on
how to earn crypto in difficult 2022! Especially when it is impossible

to get it without investments. Believe me, there are still methods. All courses are paid from the DFN balance.

**№11-14** - **Different categories of courses**. From learning how to make robots (bots) on your own to learning how to launch your own token and investing to crypto without risks!

**№15** - **Cyborgs are robots, they are bots!** Mini-programs for working on sites through virtual browsers! Bots for making money. All programs are limited in their capabilities until you upgrade your account. This can be done by replenishing the DFN balance, or by completing quests and other tasks on the platform.

**№16 - Battle Drones -** this section contains bots that will help you a lot in your work. Be sure to read this section - drones.

**№17 - Nanites** - auxiliary software for professional tasks

**№18 - Workshop** - digital goods. Proxies, accounts, etc.

**№19 - Seismic-scrolls** - sacred knowledge to control your robots. Each bot requires an individual approach to itself, you can master it through the study of scrolls. The instructions will describe in detail how to properly install, configure and run bots. Use strategies and advice on what to avoid and where to focus your efforts. How not to run into a massive ban and how to save on consumables.
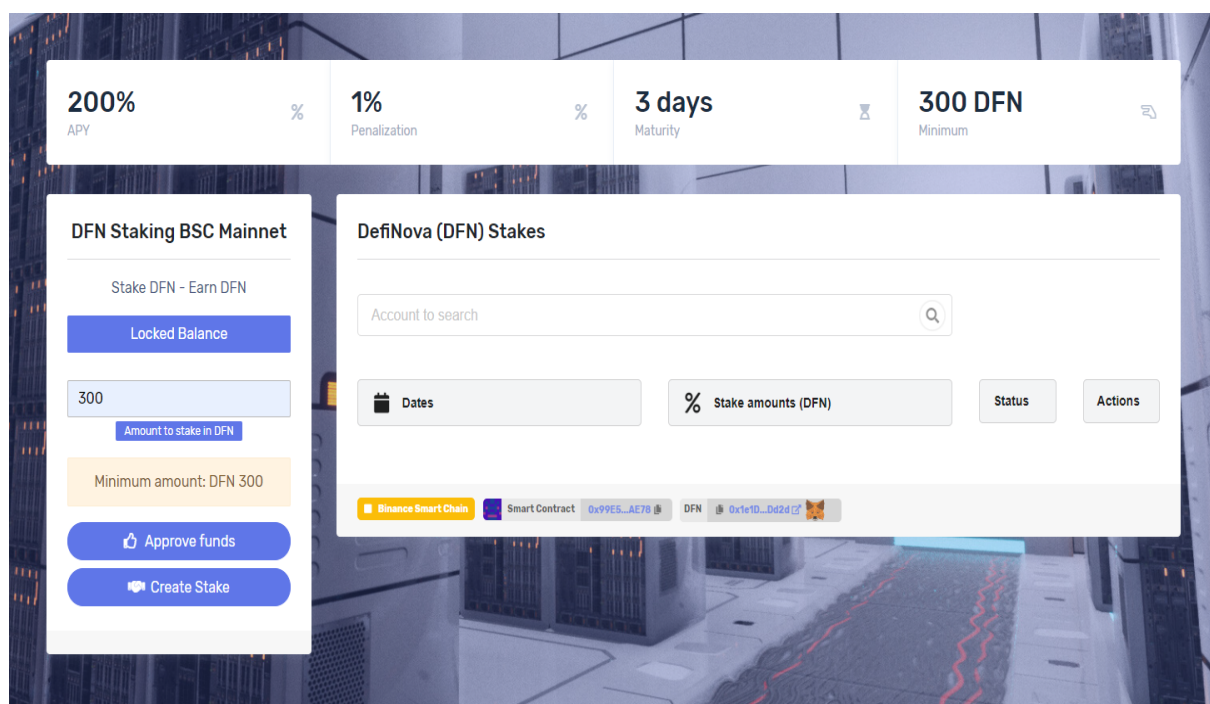

**№20 - Definova Bank** - where without staking - DFN TOKEN auto farm. The minimum investment period is 3 days. You can see the % in this section. Minimum deposit 300 DFN.

You must have a wallet logged in and have at least 300 DFN on your balance - enter the amount and click Amount to stake in DFN

**№21 - NFT -** in development, cards for sale on well-known platforms.

**№22 - Plasma squeezer** - exchange DFN for plasma. Especially suitable for those who want to immediately improve their account in order to use bots at full capacity with advanced skills and are ready to invest in the platform.

**№23 - Downloads -** information about your purchases

**№24 - Enrolled-courses -** purchased courses and video tutorials library

**№25 - Purchase-history -** bot usage history

**№26 - Settings** - account settings, change password and nickname, and API key

**№27 - Exit** - log out of your account. For example, if you are logged in from someone else's device

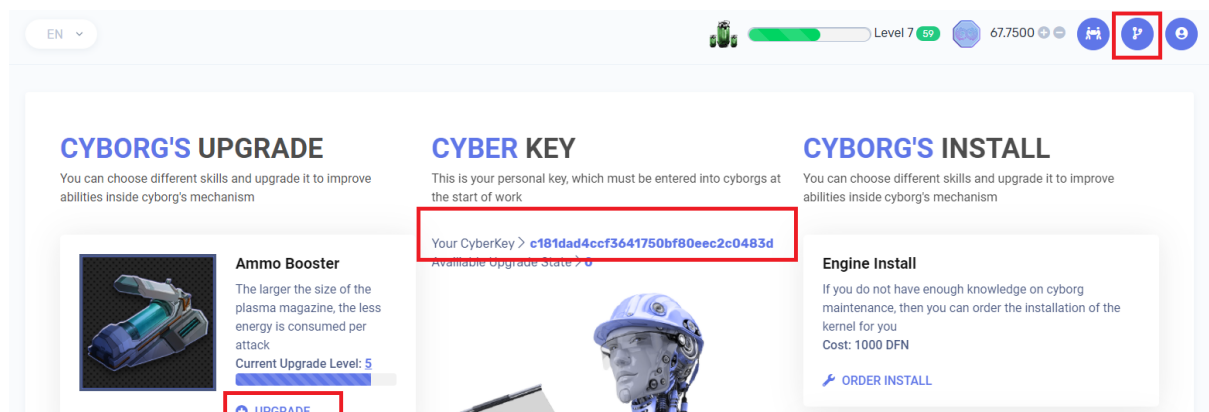

## 3.3 Engineering Center on the example of the cyborg Aviso

When registering a new account, you will be given a small amount of DFN on your account for a new registration. This is enough for you to start the bot. Then we go to the engineering center (right corner). The most important thing we need is our CyberKey. Using this key,

your account will be synchronized with the bot. When the bot works, it will consume your DFN balance, also know what skill settings it has. The more you use bots, the higher your account level. You will be able to improve the UPGRADE skills of your bots. For example, the skill Ammo Buster, then all bots will be lower than the cost of service for **useful performed action** at level 5, it will become 0.75 instead of 2 DFN!

Cyborg's install is an additional paid service from the creators of the platform. If for some reason you don't understand bots. You can pay for a ready bot installation on your device or get a service consultation from Definova specialists. We also take orders for the development of new ready bots of any complexity.

## 3.4 The system for calculating the cost of useful action for bots

**Ammo Booster - Total Levels = 6**
-Ammo Booster - the skill is responsible for reducing the consumption of DFN tokens for a useful action in the bot.
You have the opportunity to improve the level 6 times. Each level will have a positive effect on the bot's abilities. These parameters are individual for each bot. You can familiarize yourself with them when choosing each bot.

**Weapon Overdrive - Total Levels = 5**
-The proportion of the probability of the bot working (50% success and 50% skipping of the useful action) upgrade. The weapon stops wedging (intentionally skipping a useful action) every time and the cyborg fights more efficiently with its help
Level 0 - 50% of the bot performs the action and 50% does not stand still
Level 1 - 60% of the bot performs the action and 40% does not stand still
Level 2 - 70% of the bot performs the action and 30% does not stand still

Level 3 - 80% of the bot performs the action and 20% does not stand still
Level 4 - 90% of the bot performs the action and 10% does not stand still
Level 5 - 100% chance of working

**Speedy Missile - Total Levels = 6**
-Frequency of useful actions (default delay 30 sec.) Upgrade -5 sec delay (deliberate pause between useful actions)
To increase the rate of fire from weapons, you need to pump the pulse module
Level 0 - 30 sec. Delay between useful actions in the bot
Level 1 - 25 sec. Delay between useful actions in the bot
Level 2 - 20 sec. Delay between useful actions in the bot
Level 3 - 15 sec. Delay between useful actions in the bot
Level 4 - 10 sec. Delay between useful actions in the bot
Level 5 - 5 sec. Delay between useful actions in the bot
Level 6 - 0 sec. Delay between useful actions in the bot

**Plasma Battery - Total Levels = 5**
-Total running time of bots (by default 4 hours a day) upgrade +4 hours. To increase the operating time, it is necessary to insert as many battery modules into the cyborg as possible.

Level 0 - 4 hours a day, the total working time of the bot
Level 1 - 8 hours a day, the total working time of the bot
Level 2 - 12 hours a day, the total working time of the bot
Level 3 - 16 hours a day, the total working time of the bot
Level 4 - 20 hours a day, the total working time of the bot
Level 5 - uptime without limits
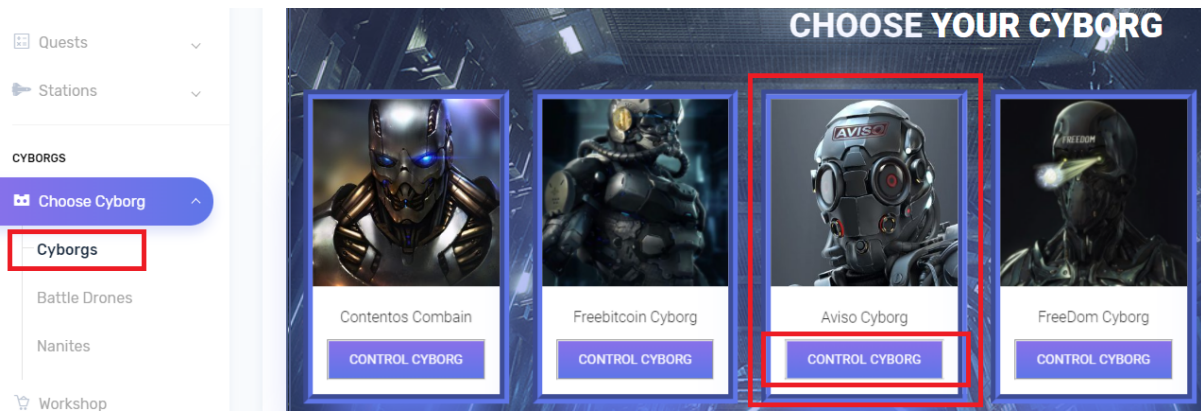

# How to get a bot for example: Aviso

Go to the cyborgs section and download the "PLACE ORDER" aviso bot - Thank you. Your order has been received.

configure it according to the instructions. It's in the Seismic-scrolls After installing the bot, you need tolls section.

# 3.5 Cabinet - Automancer
As you gain green plasma as experience and level up, in addition to the engineering center, you can develop account abilities.
This section will be launched on ver 2.0

# 3.6 Activity reward table:
The section is under construction.
There will be a user rating system and a bonus system.
1. Development rating of the popularity of using bots
2. Rating of user activity in attracting referrals
3. Rating of contribution to staking

# 3.7 DFN earnings on liquidity:
You can exchange your tokens (usdt / bnb / btc) for a DFN token using the liquidity tool, then you will automatically earn. You will provide your asset for trading in the market and become a trading agent. You will be credited with a% of the commission on every trade exchange of DFN tokens on the market.

# 4. Analysis of the advantages of the DeFinova platform

**4.1 Integration of automation in bots in cryptocurrency**
**4.2 Versatility of DeFinova**
**4.3 Platform incentive model**
**4.4 DeFinova Platform Ecosystem**

## 4.1 Integration of automation in bots in cryptocurrency

Our main idea of the project is an innovative business model "earnings through browser automation" on a digital crypto platform. We have implemented the management of robots through multi-level integration into the platform panel, which is based on cryptocurrency. Our expanded Metaverse will allow everyone to have as much cryptocurrency as they want.

## 4.2 Versatility of DeFinova

Our project does not rely on the lifecycle of an individual product, which allows the platform to expand indefinitely and promote the DFN token.

## 4.3 Platform incentive model

The development system of the token is due to the work of miniprograms that perform work in an Internet browser instead of a person. Real live work. Unlike other platforms, where the growth of the project depends only on the inflow of new investments. DFN token is a resource that grows due to the work of programs that perform work on freelance sites, faucets and other work services. The DFN token, as a management token, is an investment scenario for users who do not use the platform's products, but only invest in the platform. They can easily profit from the fact that the main bots on the platform are free, which is certainly a big advantage and will give a sharp boost to new users.

## 4.4 DeFinova Platform Ecosystem

Our platform is a gaming space that is used in most action-games on the computer and provides an opportunity to move from playing to making money, such an advantage will allow us to attract more and more new users so that they become fans of our blockchain platform. This innovation expands the consumer market tenfold.

# 5. Automate earnings

**The DFN platform offers several ways to automate earnings:**
1. Install and run bots for earning
2. Use the indicator to trade derivatives
3. BNB to DFN staking mode
4. Rating of contribution points for individuals
5. Referral program 10% payout in DFN
In the future, more bots will be available to make money and create digital goods for sale.

**For a better understanding, we have concluded 5 types of earnings from different areas and combined it into one DFN:**
Main users: buy DFN → Logged into the platform → Downloaded and launched bots → Earned from payer sites → Pay for the work done in DFN on Definova → Successfully distributed your profit

· **Traders on exchanges**: depending on the strategy, they can rent all the instruments in the derivatives indicator. Then they will be able to get more profit with minimal risks of losing their trading deposit.

· **Advanced investors**: regardless of the medium or long-term investment strategy, investors can stake their assets from 3 days and receive %. Due to this, they will receive more DFN tokens every day, which will also grow in price!

· **Platform leaders**: have the right to insider information and additional platform features, the VIP investor receives an additional % on staking. In addition, the leader has the right to status in the project chats.

In addition to all goods and services, arbitrageurs and active users have the opportunity, in addition to all goods and services, to promote and earn on attracting new users and receive DFN tokens for this from all payments of the invited audience. Then these users can exchange DFN tokens on exchanges and then proceed at their own discretion to sell or invest in cryptocurrency. Active referrals will also be rewarded with bonuses and gifts.

# 6. Technological support

The abundance of smart contract applications for the core DFN modules makes the platform free, open and fair. The team also makes adjustments based on their experience to ensure platform performance. The goal should be achieved step by step through technological advances, but this should never be the only method.

## 6.1 Fixed assets will be transferred to DFN.
User accounts, cryptocurrencies and other key assets will be preserved using blockchain technology. The DFN of these properties will be issued in BEP-20 standards, allowing users to transfer their assets as they wish.

## 6.2 Decentralized asset flow.
On-chain properties can be sold in decentralized markets or other markets from a third party. Users can transfer their assets directly if the market accepts BSC chains.

## 6.3 DFN details of this platform
will be made public Users have full access to all DFN details on the

Definova platform, which is useful for evaluating prices and transactions in other markets.

## 6.4 Platform smart contracts

The Definova Token Contract is a DFN Token Contract that is responsible for the issuance, sale, and reproduction of DFNs and their trading - the DFN Asset Contract, which is responsible for the balance in Definova. DFN Split Agreements - Pool Contracts at Definova.

**Description of the functionality of the Definova smart contract**

The smart contract was issued based on the Binance Smart Chain blockchain using the Chocolate algorithm.

Chocolate is an advanced set of interfaces, contracts, and utilities that implement the standard Ethereum token, BNB, focused on security, and also add an extra layer of advanced functionality.

**Definova token contract has all basic and advanced ERC-20 (BEP-20) methods such as:**

**Total supply** - Total number of tokens in existence

**Balance** - Gets the balance of the specified address

**Transfer** - Send an amount tokens from and to specific addresses

**Approve** - Authorize the address to spend the specified number of tokens on behalf of the owner. (Authorize an address to spend the specified amount of tokens on behalf of the owner.)

**Allowance** - Check the number of tokens that the owner has allowed to spend. (Check the number of tokens that an owner allowed to a spender.)

**Transfer from** - Spend tokens that were previously approved by the owner. (Spend tokens that were previously approved by the owner.)

**Burn** - Ability for an owner of tokens to destroy (burn) tokens

**Mint** - Authorized accounts can create new tokens, this will increase the total supply, and new tokens will be assigned to an specific account

In the event of a shortage of tokens to ensure the health of the entire ecosystem of the Definov universe and robotic assistants, the system is intended to release a new circulation of DFN tokens.

**Pause / unpause** - Authorized accounts can pause and resume all activities with tokens. (Authorized accounts can pause and resume all token activity.)

The function of stopping trading is a panic button in case of penetration by intruders in order to steal funds.

After its activation, operations for the purchase and sale of the DFN token will be unavailable until the danger is eliminated. After that, the trade will be restored. This function is used by all banking systems in the world.

# 7. Development of DFN

Due to this platform, all DFN game players automatically form a decentralized organization that includes all users and holders of DFN tokens. The token will be distributed to holders to achieve a state of autonomy.

**Step one**: issuing tokens. By creating a DFN and developing an account, and most importantly using bots, all users will be able to find friends and companions to create a vibrant family.

**Step two**: bet on votes. Large DFN holders can put the DFN in the voting system to qualify. The vote they participate in will determine which path DFN will take in the future.

**Step Three**: Conduct. DFN holders will decide what kind of governance structure they want to adopt and how much DFN is needed to stack.

# 8. Roadmap 2022-2023.

**Stage №1** - **New Born**

Definova is born ✅

Initial development of the Definova Platform Webapp ✅

Token launch on BSC ✅

Liquidity added 0.01% of Total Supply on PancakeSwap ✅

Initial development of the Definova Automated Bots with DFN integration ✅

Token website ✅

Social media channels ✅

Initial Marketing (Coin ratings, coin services listings) ✅

TechRate Free Audit Passed ✅

Whitepaper ✅

**Stage 2 - Definova App**

GameFI development and testing

Pre-Alpha version of Platform and Focus group testing

Platform App and Automated Bots video demonstration

Staking contract launch on BSC

Introducing staking on platform

Core team formation / Launch NFT Marketplace x

Apply for CMC and CoinGecko listings (if volumes will be high)

1000 HOLDERS

**Stage 3 - Marketing & PR**

TechRate or Coinmooner audit

Paid ads on multiple platforms

Influencers Promotions

Mass Media Articles

Major press releases and influencer-marketing partnerships

CMC and CoinGecko listings (if volumes will be high)

5000 Holders

**Stage 4 - Improvements of Environment & Additional GameFI mechanics**

App improvements based on community feedback,

New app features,

A series of video AMAs

20,000 Holders

**Stage 5**

Definova 2.0 launch

Huge marketing push in Q4 2022

CEX Listing

**Stage 6**

Expansion of the app to other networks (Cardano, ETH, Polygon, KuCoin),

Binance listing

To a parallel universe! The moon is overrated.

# 9. Buying DFN on the PancakeSwap platform

**Customize your MetaMask.**

First, make sure your Metamask wallet chooses the main binance Smart Chain (BSC). How to configure Metamask to work with BSC

Click "Add Network" in the upper right corner to manually add the Binance Smart Chain - it is not connected to MetaMask by default. It is important to note that here we can use two networks: test or main. Below are the parameters that you need to specify for each of them.
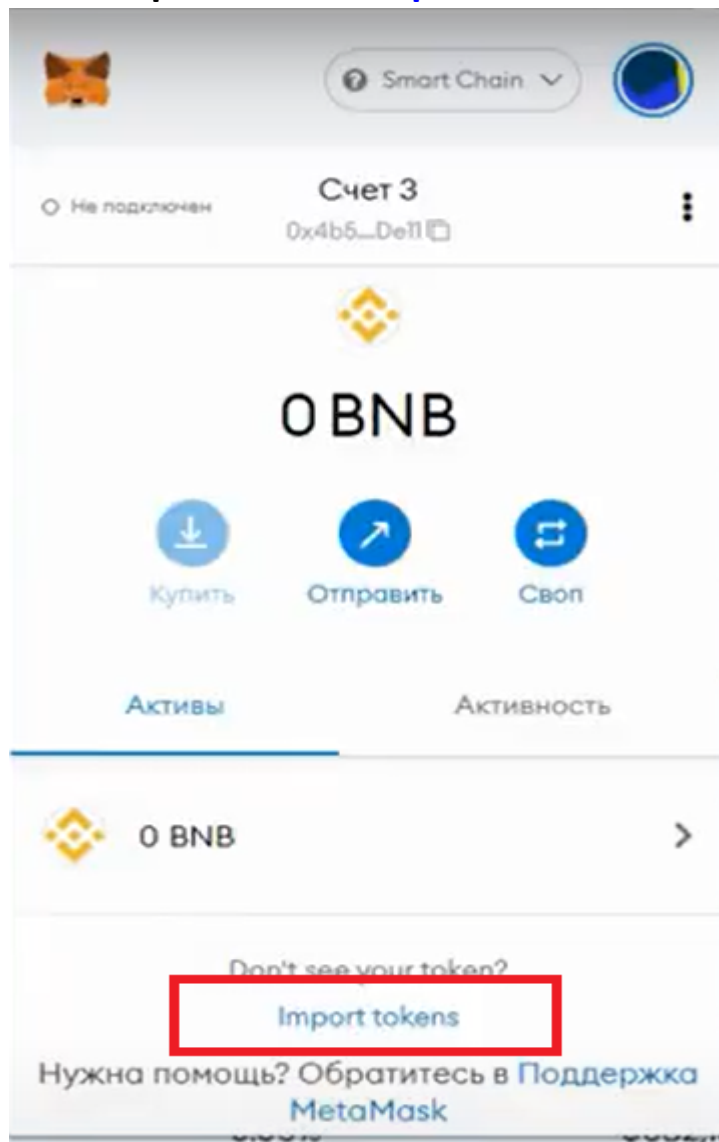

**Main network (probably the one you want)**
**Network name: Smart Chain**
**New RPC URL: https://bsc-dataseed.binance.org/**
**Network ID: 56**
**Symbol: BNB**
**Block Explorer URL: https://bscscan.com**

After selecting the BSC network, you need to add the token through
the contract **0x1e1DB619834036435bEbE71574589b21e4EDDd2d**.
Then top up $ BNB to buy $ DFN and pay gas commission.
Buy $ DFN on PancakeSwap

Connect to your Metamask wallet go to the PancakeSwap website (**https://pancakeswap.finance/**) and click "Connect Wallet".
Buy DFN / BNB click "My Account" and "Buy".

Search for "DFN" or enter contract:
**0x1e1DB619834036435bEbE71574589b21e4EDDd2d**
then you will find the token.

Specify the amount and click "Exchange" (SWAP) to purchase DFN tokens. Now they will be stored in your wallet. You can transfer them to the DefiNova platform and replenish staking, then you will have an increase in the number of tokens.

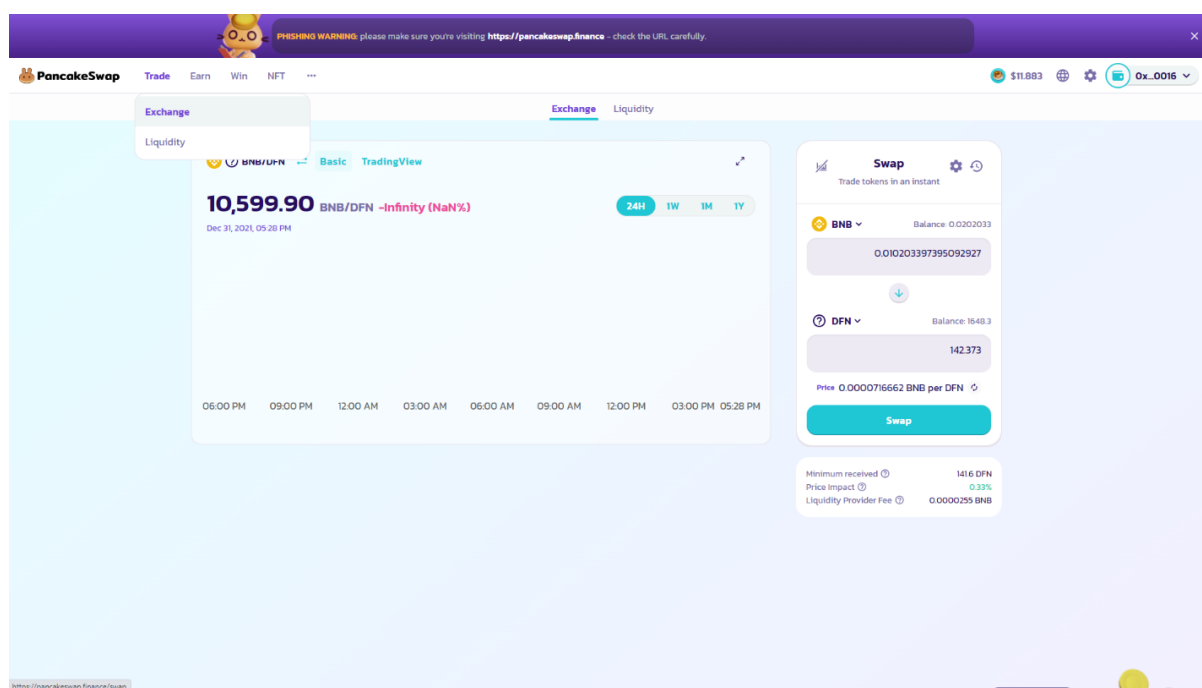

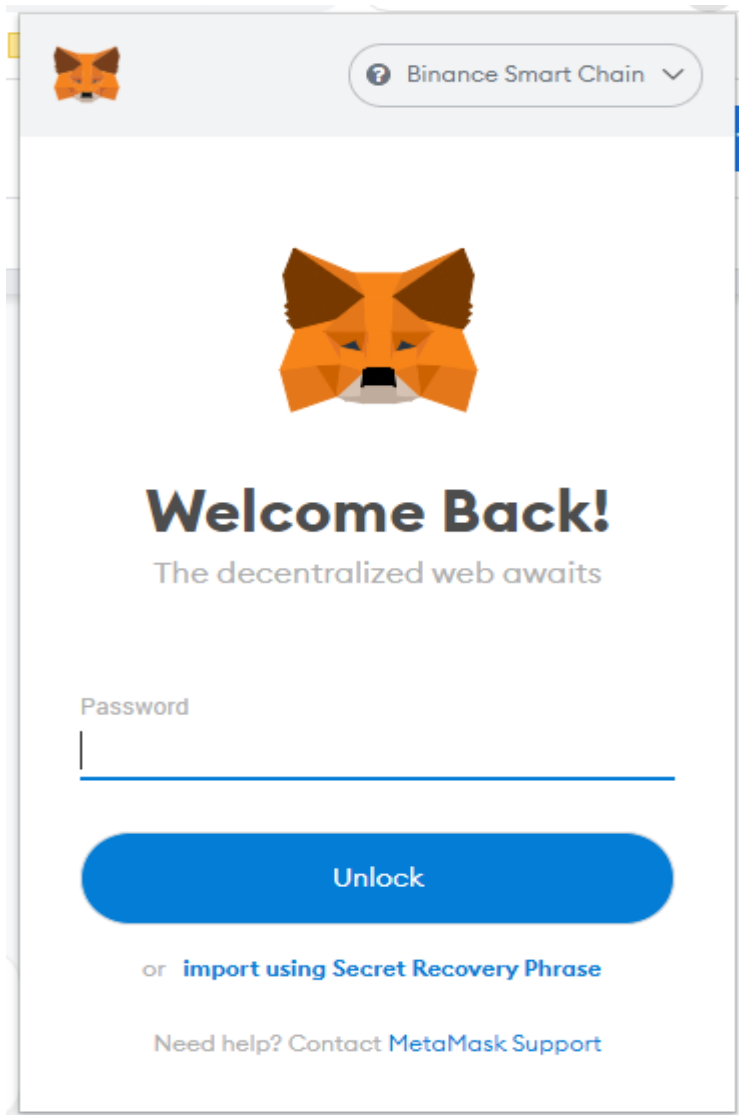

# 10. DFN top-up on the Definova platform

Wallet tutorial when the video will be available, you can describe the procedure for purchasing goods

**1.Using a browser** that supports the MetaMask plugin, install the MetaMask plugin, open the official website: https://definova.club/,

enter MetaMask (it is recommended to use MetaMask to check your DFNs).

**2. After entering MetaMask,** click "Connect Wallet" for the wallet to connect to the official website https://definova.club/

**3. After enabling,** click top up DFN tokens

# Deposit Balance DFN

Recommended Price  10.0000

**Name Your Price**  10

**Recommended Price  10.0000**

**Minimum price allowed  10.0000**

Buy Now

**4. Select the number** of "Name Your Price" and click "Buy Now".

## Checkout

Billing details

Your order

| Product | Subtotal |
|---------|----------|
| Deposit Balance DFN × 1 | 10.0000 |
| Subtotal | 10.0000 |
| Total | 10.0000 |

- Pay with DFN

**Payment in DFN tokens will be due.**

Your personal data will be used to process your order, support your experience throughout this website, and for other purposes described in our privacy policy.    Place order
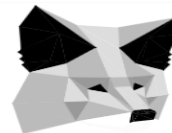

**5. A purchase order** has been generated, click "Place order".

## Order received

Thank you. Your order has been received.

- Order number: **2585**
- Date: **December 30, 2021**
- Email: **mirkli@gmail.com**
- Total: **10.0000**
- Payment method: **Pay with DFN**

# Pay with DFN

### MetaMask

MetaMask is a bridge that allows you to visit the distributed web of tomorrow in your browser today. It allows you to run Binance Smart Chain dApps right in your browser without running a full Binance Smart Chain node.

CONNECT 🔒

**6. Connect** your Metamask wallet

# Pay with DFN

**MetaMask**

Account
0x5065A45374953eaF5

DISCONNECT 🔒

DFN

Choose currency to pay with

| Amount | Balance |
|---|---|
| 10 DFN | 1648.3075 DFN |

DEPOSIT 🖳

Advanced          Open to see advanced controls          ⌄

**7. Make a Deposit.** If they write to you Payment failed. Try to adjust gas setting - it means you need to top up the metamask balance in bnb to pay the commission. You need 0.003 bnb minimum. (it's best to always keep bnb on your balance sheet).

**8. Next**, your Metamask will ask you to confirm the transaction - OK. DFN must be credited to your balance! You can manage them according to

# 11. Disclaimer:

The information provided in this document is for informational purposes of the Definova project only. This should in no way be interpreted as a recommendation to invest your assets. Asset prices involve risks that are beyond the control of the founding team, such as market conditions. In addition, the plan outlined in this document may be adjusted to adapt to future situations to maximize the performance of the Definova platform.

# Epilogue. Summary

Definova is a future-oriented decentralized strategic platform. Faced with the crypto world, users have the opportunity to earn from the proposed tools by the project developers. The project has turned into a decentralized environment with a network model of economic resources, which is completely based on the exchange of useful actions from robots for tokens. Decentralized governance of the platform will mean that the player is completely controlled by the console related to his earnings, and will open up the possibility of integration with other automatic types of income.

Every new member will have equal rights no matter when he comes to the fascinating world of Definova. We strive to create a universe of honest and open relationships!
